

HELIANTHUS : SUNFLOWER ATTACHMENT

HELIANTHUS

FULL FIELD PRODUCTIVITY

The Helianthus front attachment for sunflower harvesting adopts a row-independent harvesting system: this means that its overall dimensions determine the harvesting width without having to worry about row spacing, which can range from 40 cm to 75 cm.

The quality of this platform is guaranteed by a stable, reliable and efficient worldwide brand. HELIANTHUS, an ancient name for an innovative product!

THE REEL IS HEIGHT AND SPEED ADJUSTABLE

The reel is hydraulically height adjustable from the cab of the combine harvester, to constantly conform to the height of the cut based on the different heights and varieties of sunflowers. Reel speed is also hydraulically adjustable from within the cab (optional accessory) using a kit that allows you to conveniently synchronize its speed at will based on the machine's forward speed. The auger's drive is made safe by a torque limiter that stops it being damaged in the event of jamming.

All drive shafts are made from steel alloy and have undergone surface hardening to provide long life and wear resistance. The whole cutting system comprises top-quality components, as does the gearbox transmitting motion to the blade. The divider points are designed to drastically reduce crop losses and are made from wear-resistant steel. Nothing is left to chance, not even the paintwork: all CAPELLO products are coated to the strictest ISO standards in electrostatic powder coating systems and pass the strictest testing.

The auger features one-piece construction, ensuring perfect crop flow into the feeder house.

The spoon-shaped divider points are made from wear-resistant steel.

TECHNICAL DATA

	CUTTING WIDTH [m]	TOTAL WIDTH [m]	WEIGHT [kg]
HELIANTHUS 5700	5,7	6,3	1800
HELIANTHUS 7500	7,5	8,0	2400
HELIANTHUS 9400	9,4	9,9	2800
HELIANTHUS 12000	11,9	12,4	3500
